The Science Experience Presents Moon Matter

The Science Experience is presenting lunar material brought back from the moon in the early 1970s to various schools in the Inland Empire. Bill Souder, our Director of Engineering, is a certified lunar materials handler having completed a certification course at the NASA/JPL center in Pasadena.

Over 3,000 students and their teachers have had the opportunity to see these invaluable artifacts. Mr. Souder, an amateur astronomer for over 50 years, uses samples of similar Earth materials to explain the origins of the various samples and how similar materials from Earth compare to the lunar materials.

The Science Experience is a 501c3 nonprofit dedicated to improving Science, Technology, Engineering and Mathematics (STEM) learning opportunities in the Inland Empire. Donations in support of the science center may be made on our website or by mail.
